

Reduce Cable Waste and Labor Costs with Single-Use Pulling Eyes

WireXpress's single-use pulling eye system for medium-voltage cable is a cost-effective alternative to traditional pulling eyes. Installed by WireXpress prior to shipment, these eyes reduce cable waste and labor costs. The eyes are installed using sealant to make them block moisture during the pull. They also come with staggered lanyards for easy installation in conduit.

Features

- Water-barrier with sealant and heat-shrink tubing
- Installed in clean, protected environment
- Staggered lanyards
- Shipped with cold-shrink end caps

NOTE: For installations where the cable ends may be submerged for a long period of time, the pulling eye should be cut off after the pull and the cold shrink end cap should be applied.

Benefits

- Reduces on-site labor for installing eyes
- Reduces material to order, receive and unpack
- Reduces the need for tooling
- Provides more security than grips
- Eliminates messy residue
- Leaves less conductor scrap
- Makes pulling in conduit easier
- Reduces injury from on-site installation
- Prevents long-term moisture with end caps

The WireXpress Difference

With \$1 billion of inventory from over 500 manufacturers, we've got you covered. We're a redistributor, so we never sell to your customers (we ONLY sell to other Distributors). We help you sell more by listening to your needs, developing solutions, and providing quality products and services. No other redistributor in our industry offers a more comprehensive inventory, and with our network of 40-plus warehouses across the United States and Canada, most products are just a day or two away from you or your customer. With more products to sell, you'll have more sales opportunities.

You need it? We got it.

Corporate Snapshot

Expand Your Portfolio

Our goal is to help our customers quote a complete bill of material, expand beyond their core offerings, support their customers anywhere geographically, and write larger orders.
