

CORFLEX®

TYPE MC-HL & MV-105 or MC-HL
OIL & GAS CABLES

Nexans
 AmerCable

The Original MC-HL Technology

In 1958 Canada Wire and Cable, which is now part of Nexans, developed the first continuous corrugated and welded cable sheath. This product proved to be ideal for the oil and gas industry where liquid and gas ingress in hazardous operating conditions is a huge safety issue. The CORFLEX® trade mark was registered in 1960, and more than 50 years later continues to be recognized as a symbol of excellence for continuously corrugated cable in the MC-HL and MV-105 or MC-HL markets.

Armor

Continuous corrugated and welded, impervious aluminum sheath with no more than 0.2% trace copper provides complete protection against liquid and gas ingress.

Flame Retardant

All CORFLEX cables pass UL 1685 and IEEE 383 vertical tray fire tests at 70,000 BTU/hr, IEC 60332-3 category A fire test, IEEE 1202 and CSA FT4. CORFLEX rated less than 5 kV also passes ICEA T-29-520 fire test at 210,000 BTU/hr.

INDEX

Instrumentation Cables

- Pairs and Triads (600V*) 2 - 3

Power and Control Cables

- Multi-conductor w/ Bare Ground(s) (600V*) 4 - 5

Composite Power and Control Cables

- Multi-conductor w/ Bare Ground (600V*) 6 - 7

Power Cables

- 600V* 3 and 4 Conductors with Bare Ground(s) .. 8 - 9

Medium Voltage Cables

- 5kV - 133% Insulation Levels 10 - 11

- 8kV - 100% Insulation Level 10 - 11

- 15kV - 100% & 133% Insulation Levels 12 - 13

Nexans AmerCable believes the information presented throughout this catalog to be reliable and current. All information is subject to change without notice. The information listed is approximate, and is presented only as a guide for product selection. We make no claims or warranties for the suitability of any product for any particular application.

Nexans CORFLEX® cables are designed for reliable performance in a variety of industrial, commercial and utility applications including oil and gas applications requiring an externally armored cable. Exceptional fire ratings, impact resistance, flexibility and an impervious metallic sheath are key features of this popular cable product.

CORFLEX installation may be in wet or dry locations, in trays, troughs, wireways, directly buried or embedded in concrete. It can also be used in plenums (with no outer coverings), ducts and other airways per NEC 2008 and NEC 2011 Article 300.22.

Nexans CORFLEX MC-HL and MV-105 or MC-HL cables can be installed in hazardous locations designated Class I, II & III, Divisions 1 & 2 as per NEC 2008 and NEC 2011 (HL Rated).

CORFLEX MC-HL cables are designed for use on power and control circuits with 600 volt rating. Cables are suitable for use as feeders and branch circuits for power, control, lighting and signaling as per NEC 2008 and NEC 2011 Articles 330, 725 & 727.

CORFLEX MV-105 or MC-HL cables in this catalog are designed for use on power circuits. Cables are suitable for use as per NEC 2008 and NEC 2011 Article 328 as feeders and branch circuits.

CORFLEX cables are UL Listed as Marine Shipboard Cable (File E86139) 600V/1000V.

AMPACITY RATINGS

Instrumentation Power & Control VFD

Based on NEC 2011 Table 310.15(B)(16) for not more than three current-carrying conductors (where the 4th conductor is the neutral of a 3-phase, 4 wire system) in raceway, cable, or earth (direct buried), based on an ambient temperature of 30°C (86°F). Refer to Table 310.15(B)(2) for the ampacity correction factors where the ambient temperature is other than 30°C (86°F).

Medium Voltage

See **Notes** on Pages 11-13

CORFLEX® MC-HL INSTRUMENTATION

600V • PAIRS & TRIADS

600V/1000V MARINE SHIPBOARD CABLE

Rated 90°C • Single or Multiple Individually Shielded Pairs or Triads, Overall Cable Shield

Insulation

Flame-retardant PVC, 15 mils nominal thickness, nylon jacket, 4 mil nominal thickness.
90°C temperature rating, per UL Standard 66.

Insulation Shield

Aluminum foil/polyester shield helically wrapped to provide 100% coverage and tinned copper drain wire that is two gauge sizes smaller than the circuit conductors. These shields are electrically isolated from each other.

Armor

Continuous corrugated and welded, impervious aluminum sheath with no more than 0.2% trace copper providing complete protection against liquid and gas ingress. Provides excellent mechanical protection, additional electrostatic shielding, and serves as an easy means for grounding equipment.

Conductor

Bare, annealed copper conforming to ASTM B3 and Class B stranded in accordance with ASTM B8.

Overall Cable Shield

Aluminum foil/polyester shield helically wrapped to provide 100% coverage. Tinned copper drain wire that is the same size as the circuit conductors.

Inner Jacket

Polyvinyl chloride jacket, over cabled core as per UL1569, 90°C temperature rating, with additional resistance to flame spread. A rip cord is laid longitudinally under the jacket to facilitate stripping.

Jacket

Overall black polyvinyl chloride jacket per UL 1569, 90°C temperature rating; low acid gas emission; limited flame spread and excellent corrosion resistance.

Assembly

Pairs/triads are cabled in concentric layers with interstices filled with suitable non-hygroscopic fillers, as required. A binder tape of synthetic material assembles the core in an essentially round configuration.

Conductor ID

Pairs: black/white & number coded
Triads: black/red/white & number coded

Ratings & Approvals

- 90°C Temperature Rating
- Meets UL 1309 and IEEE 1580 requirements for Marine Shipboard Cable
- Meets UL 1569 requirements for Type MC, Metal Clad cables
- Meets UL 2225 for Hazardous Locations
- Designated Type MC as per NEC 2008 and NEC 2011 Article 330

APPLICATION

CORFLEX® instrumentation cables minimize noise and signal interference to enhance performance in instrumentation, data flow, computer & data logging applications – especially in areas where high voltages or high currents are present.

FEATURES

- UL listed as Marine Shipboard Cable (File E86139) 600V/1000V
- UL listed as Type MC-HL, 600V (File E47409)
- UL listed insulated conductors
- Flame retardant: UL 1685 and IEEE 383 vertical tray fire tests at 70,000 BTU/hr, ICEA T-29-520 fire test at 210,000 BTU/hr, IEC 60332-3 category A fire test, IEEE 1202 and CSA FT4
- Cables are American Bureau of Shipping (ABS) listed as CWC MC Type MC
- Cables are marked “-40°C” and are suitable for handling and installation down to -10°C (based on -40°C impact and bend tests per UL 1569)
- Temperature rating of 90°C dry and wet
- 130°C emergency rating and 250°C short circuit rating
- Continuous, impervious aluminum armor corrugated for flexibility, prevents ingress of moisture, gases and liquids
- Aluminum armor resistance exceeds requirements of the NEC 2008 and NEC 2011 Article 250.178 for equipment grounding conductor
- Minimal noise and signal interference
- Excellent mechanical and physical properties
- Sunlight resistant jacket
- Suitable for direct burial, use in cable tray and embedment in concrete
- Suitable for Class I, II and III, Divisions 1 & 2 as per NEC 2008 and NEC 2011 (HL Rated)

BEND RADIUS

- Fixed position: 7 x cable overall diameter
- During pulling: 12 x cable overall diameter

CORFLEX® is a registered trademark of Nexans

CORFLEX® MC-HL ARMORED POWER & CONTROL 600V • MULTI-CONDUCTOR 600V/1000V MARINE SHIPBOARD CABLE

Rated 90°C • Multi-Power Conductors with Bare Ground(s)

Conductor

Bare, annealed copper conforming to ASTM B3 and Class B stranded in accordance with ASTM B8.

Assembly

Conductors are cabled in concentric layers with grounding wire, interstices are filled with suitable non-hygroscopic fillers, as required. A binder tape of synthetic material assembles the core in an essentially round configuration.

Jacket

Overall black polyvinyl chloride jacket per UL 1569, 90°C temperature rating; low acid gas emission; limited flame spread and excellent corrosion resistance.

Conductor ID

Multi-conductor
14 AWG to 10 AWG;
Method #1-E2 per
ICEA S-73-532

Insulation

Cross-linked polyethylene type XHHW-2 per UL 44.

Grounding Conductor

Bare, annealed copper conforming to ASTM B3 and Class B stranded in accordance with ASTM B8. Meets or exceeds requirements of NEC Table 250.122.

Aarmor

Continuous corrugated and welded, impervious aluminum sheath with no more than 0.2% trace copper providing complete protection against liquid and gas ingress. Provides excellent mechanical protection, additional electrostatic shielding, and serves as an easy means for grounding equipment.

Ratings & Approvals

- 90°C Temperature Rating
- Meets UL 1309 and IEEE 1580 requirements for Marine Shipboard Cable
- Meets UL 44, XHHW-2 600V conductors
- Meets UL 1569 requirements for Type MC, Metal Clad cables
- Meets UL 2225 for Hazardous Locations (HL)
- Dual certified IEEE 1580 and UL 1309 Type CWC MC
- Designated Type MC as per NEC 2008 and NEC 2011 Article 330
- Meets CSA C22.2 No. 123 for Aluminum Sheathed Cables
- Meets CSA C22.2 No. 174 for Hazardous Locations

APPLICATION

Designed and constructed for the demanding environments of offshore drilling and petroleum facilities located throughout the world requiring a type MC-HL cable.

FEATURES

- UL listed as Marine Shipboard Cable (File E86139) 600V/1000V
- UL listed as Type MC-HL, 600V (File E47409)
- UL listed insulated conductors
- Flame retardant: UL 1685 and IEEE 383 vertical tray fire tests at 70,000 BTU/hr, ICEA T-29-520 fire test at 210,000 BTU/hr, IEC 60332-3 category A fire test, IEEE 1202 and CSA FT4
- Cables are American Bureau of Shipping (ABS) listed as CWC MC Type MC
- Cables are marked "-40°C" and are suitable for handling and installation down to -10°C (based on -40°C impact and bend tests per UL 1569)
- Temperature rating of 90°C dry and wet
- 130°C emergency rating and 250°C short circuit rating
- Continuous, impervious aluminum armor corrugated for flexibility, prevents ingress of moisture, gases and liquids
- Aluminum armor resistance exceeds requirements of the NEC 2008 and NEC 2011 Article 250.178 for equipment grounding conductor
- Armor provides good EMI shielding so that CORFLEX can be used in certain instrumentation applications when adequately grounded
- Excellent mechanical and physical properties
- Sunlight resistant jacket
- Suitable for direct burial, use in cable tray and embedment in concrete
- Suitable for Class I, II and III, Divisions 1 & 2 as per NEC 2008 and NEC 2011 (HL Rated)

BEND RADIUS

- Fixed position: 7 x cable overall diameter
- During pulling: 12 x cable overall diameter

Notes:

- 1) Ampacities are in accordance with NEC 2008 Table 310.16 or NEC 2011 Table 310.15(B)(16) for conductors in raceway or direct buried at 30°C ambient temperature and 90°C conductor temperature. The overcurrent protection shall not exceed 15 amperes for 14 AWG, 20 amperes for 12 AWG, and 30 amperes for 10 AWG copper conductors after any correction factors for ambient temperature and number of conductors have been applied (NEC 2008 and NEC 2011 Article 240.4(D)). For correction factors for different ambient temperatures and ampacities at different conductor temperatures, see NEC 2008 Table 310.16 or NEC 2011 Table 310.15(B)(16). Ampacities for cables having more than three conductors have been derated per NEC 2008 Article 310.15(B)(2)(a) or NEC 2011 Article 310.15(B)(3)(a).

*Three conductor cables with 3 grounds are also suitable for VFD applications.

CORFLEX® MC-HL ARMORED COMPOSITE POWER & CONTROL • 600V • MULTI-CONDUCTOR 600V/1000V MARINE SHIPBOARD CABLE

Rated 90°C • 1 Bare Ground

Grounding Conductor

Bare, annealed copper conforming to ASTM B3 and Class B stranded in accordance with ASTM B8. Meets or exceeds requirements of NEC Table 250.122.

Assembly

Conductors are cabled in concentric layers with grounding wire, interstices are filled with suitable non-hygroscopic fillers, as required. A binder tape of synthetic material assembles the core in an essentially round configuration.

Conductor ID

Power Conductors
8 AWG and larger:
Method #4 per
ICEA S-73-532
Control Conductors
14, 12 & 10 AWG:
Method #1-E2 per
ICEA S-73-532

Conductor

Bare, annealed copper conforming to ASTM B3 and Class B stranded in accordance with ASTM B8.

Insulation

Cross-linked polyethylene type XHHW-2 per UL 44.

Armor

Continuous corrugated and welded, impervious aluminum sheath with no more than 0.2% trace copper providing complete protection against liquid and gas ingress. Provides excellent mechanical protection, additional electrostatic shielding, and serves as an easy means for grounding equipment.

Jacket

Overall black polyvinyl chloride jacket per UL 1569, 90°C temperature rating; low acid gas emission; limited flame spread and excellent corrosion resistance.

Ratings & Approvals

- 90°C Temperature Rating
- Meets UL 1309 and IEEE 1580 requirements for Marine Shipboard Cable
- Meets UL 44, XHHW-2 600V conductors
- Meets UL 1569 requirements for Type MC, Metal Clad cables
- Meets UL 2225 for Hazardous Locations (HL)
- Dual certified IEEE 1580 and UL 1309 Type CWC MC
- Designated Type MC as per NEC 2008 and NEC 2011 Article 330
- Meets CSA C22.2 No. 123 for Aluminum Sheathed Cables
- Meets CSA C22.2 No. 174 for Hazardous Locations

APPLICATION

Designed and constructed for the demanding environments of offshore drilling and petroleum facilities located throughout the world requiring a type MC-HL cable.

FEATURES

- UL listed as Marine Shipboard Cable (File E86139) 600/1000V
- UL listed as Type MC-HL, 600V (File E47409)
- UL listed insulated conductors
- Flame retardant: UL 1685 and IEEE 383 vertical tray fire tests at 70,000 BTU/hr, ICEA T-29-520 fire test at 210,000 BTU/hr, IEC 60332-3 category A fire test, IEEE 1202 and CSA FT4
- Cables are American Bureau of Shipping (ABS) listed as CWC MC Type MC
- Cables are marked “-40°C” and are suitable for handling and installation down to -10°C (based on -40°C impact and bend tests per UL 1569)
- Temperature rating of 90°C dry and wet
- 130°C emergency rating and 250°C short circuit rating
- Continuous, impervious aluminum armor corrugated for flexibility, prevents ingress of moisture, gases and liquids
- Aluminum armor resistance exceeds requirements of the NEC 2008 and NEC 2011 Article 250.178 for equipment grounding conductor
- Armor provides good EMI shielding so that CORFLEX can be used in certain instrumentation applications when adequately grounded
- Excellent mechanical and physical properties
- Sunlight resistant jacket
- Suitable for direct burial, use in cable tray and embedment in concrete
- Suitable for Class I, II and III, Divisions 1 & 2 as per NEC 2008 and NEC 2011 (HL Rated)

BEND RADIUS

- Fixed position: 7 x cable overall diameter
- During pulling: 12 x cable overall diameter

Notes:

- 1) Ampacities are based on NEC 2011 Table 310.15(B)(16) for not more than three current-carrying conductors (where the 4th conductor is the neutral of a 3-phase, 4 wire system) in raceway, cable, or earth (direct buried), based on an ambient temperature of 30°C (86°F). Refer to Table 310.15(B)(2) for the ampacity correction factors where the ambient temperature is other than 30°C (86°F).

CORFLEX® MC-HL POWER CABLE • 600V

600V/1000V MARINE SHIPBOARD CABLE

Rated 90°C • 3 and 4 Power Conductors with Ground(s)

Insulation

Cross-linked polyethylene type XHHW-2 per UL 44.

Grounding Conductor(s)

Bare, annealed copper conforming to ASTM B3 and Class B stranded in accordance with ASTM B8. Meets or exceeds requirements of NEC Table 250.122.

Aarmor

Continuous corrugated and welded, impervious aluminum sheath with no more than 0.2% trace copper providing complete protection against liquid and gas ingress. Provides excellent mechanical protection, additional electrostatic shielding, and serves as an easy means for grounding equipment.

Conductors

Bare, annealed copper conforming to ASTM B3 and Class B stranded in accordance with ASTM B8.

Assembly

Conductors are cabled in concentric layers with grounding wire, interstices are filled with suitable non-hygroscopic fillers, as required. A binder tape of synthetic material assembles the core in an essentially round configuration.

Jacket

Overall black polyvinyl chloride jacket per UL 1569, 90°C temperature rating; low acid gas emission; limited flame spread and excellent corrosion resistance.

Conductor ID

Sizes 14 AWG to 2 AWG:
Method #1-E2 per
ICEA S-73-532
Sizes 1 AWG to 500 kcmil:
Method #4 per
ICEA S-73-532

APPLICATION

Designed and constructed for the demanding environments of offshore drilling and petroleum facilities located throughout the world requiring a type MC-HL cable.

FEATURES

- UL listed as Marine Shipboard Cable (File E86139) 600V/1000V
- UL listed as Type MC-HL, 600V (File E47409)
- UL listed insulated conductors
- Flame retardant: UL 1685 and IEEE 383 vertical tray fire tests at 70,000 BTU/hr, ICEA T-29-520 fire test at 210,000 BTU/hr, IEC 60332-3 category A fire test, IEEE 1202 and CSA FT4
- Cables are American Bureau of Shipping (ABS) listed as CWC MC Type MC
- Cables are marked “-40°C” and are suitable for handling and installation down to -10°C (based on -40°C impact and bend tests per UL 1569)
- Temperature rating of 90°C dry and wet
- 130°C emergency rating and 250°C short circuit rating
- Continuous, impervious aluminum armor corrugated for flexibility, prevents ingress of moisture, gases and liquids
- Aluminum armor resistance exceeds requirements of the NEC 2008 and NEC 2011 Article 250.178 for equipment grounding conductor
- Excellent mechanical and physical properties
- Sunlight resistant jacket
- Suitable for direct burial, use in cable tray and embedment in concrete
- Three conductor cables have three symmetrical grounding conductors suitable for PWM/VFD and other modern AC drive/motor applications
- Suitable for Class I, II and III, Divisions 1 & 2 as per NEC 2008 and NEC 2011 (HL Rated)

BEND RADIUS

- Fixed position: 7X cable overall diameter
- During pulling: 12X cable overall diameter

Ratings & Approvals

- 90°C Temperature Rating
- Meets UL 1309 and IEEE 1580 requirements for Marine Shipboard Cable
- Meets UL 44, XHHW-2 600V conductors
- Meets UL 1569 requirements for Type MC, Metal Clad cables
- Meets UL 2225 for Hazardous Locations (HL)
- Dual certified IEEE 1580 and UL 1309 Type CWC MC
- Designated Type MC as per NEC 2008 and NEC 2011 Article 330
- Meets CSA C22.2 No. 123 for Aluminum Sheathed Cables
- Meets CSA C22.2 No. 174 for Hazardous Locations

Notes:

- 1) Ampacities are based on NEC 2011 Table 310.15(B)(16) for not more than three current-carrying conductors (where the 4th conductor is the neutral of a 3-phase, 4 wire system) in raceway, cable, or earth (direct buried), based on an ambient temperature of 30°C (86°F). Refer to Table 310.15(B)(2) for the ampacity correction factors where the ambient temperature is other than 30°C (86°F).
- 2) Three conductor cables with 3 ground wires are also suitable for VFD applications.

CORFLEX® MV-105 OR MC-HL MEDIUM VOLTAGE

5KV 133% INSULATION LEVEL

8KV 100% INSULATION LEVEL

Rated 105°C • 3 Conductors with 3 Bare Grounds

Conductor

Bare, annealed copper conforming to ASTM B3 and Class B Compact stranded in accordance with ASTM B496.

Grounding Conductors

Bare, annealed copper conforming to ASTM B3 and Class B stranded in accordance with ASTM B8.

Insulation Shield Nonmetallic

Extruded semiconducting insulation shield meets or exceeds electrical and physical requirements of UL 1072.

Armor

Continuous corrugated and welded, impervious aluminum sheath with no more than 0.2% trace copper providing complete protection against liquid and gas ingress. Provides excellent mechanical protection, additional electrostatic shielding, and serves as an easy means for grounding equipment.

Conductor Shield

Extruded semiconducting conductor shield meets or exceeds electrical and physical requirements of UL 1072.

Insulation

EPR meets or exceeds electrical and physical requirements of UL 1072.

Metallic Shield

Bare copper tape shield helically wrapped to provide 100% coverage.

Binder Tape

Synthetic material assembles the core in an essentially round configuration.

Jacket

Overall yellow polyvinyl chloride jacket per UL 1072, 90°C temperature rating; low acid gas emission; limited flame spread and excellent corrosion resistance.

Ratings & Approvals

- 105°C Temperature Rating
- Meets UL 1309 and IEEE 1580 requirements for Marine Shipboard Cable
- Meets UL 1072 requirements for medium voltage power cables
- Meets UL 1569 requirements for Type MC, Metal Clad cables
- Meets UL 2225 for Hazardous Locations (MC-HL)
- Designated Type MC as per NEC 2008 and NEC 2011 Article 330
- Insulation meets electrical and physical requirements of ICEA S-93-639/NEMA WC 74 and UL 1072
- Designated Type MV-105 as per NEC 2008 and NEC 2011 Article 328

APPLICATION

Designed and constructed for the demanding environments of offshore drilling and petroleum facilities located throughout the world requiring a type MV-105 or MC-HL Medium Voltage cable.

FEATURES

- UL listed as Marine Shipboard Cable (File E86139)
- UL listed as Type MV-105 5kV and 8kV (File E66901)
- Flame retardant: UL 1685 and IEEE 383 vertical tray fire tests at 70,000 BTU/hr, IEC 60332-3 category A fire test, IEEE 1202 and CSA FT4
- Cables are American Bureau of Shipping (ABS) listed as CWC MC Type MV/MC (Metal Clad, Medium Voltage)
- Cables are marked “-40°C” and are suitable for handling and installation down to -10°C (based on -40°C impact and bend tests per UL 1569)
- Continuous, impervious aluminum armor corrugated for flexibility, prevents ingress of moisture, gases and liquids
- Aluminum armor resistance exceeds requirements of the NEC 2008 and NEC 2011 Article 250.178 for equipment grounding conductor
- Excellent mechanical and physical properties
- Minimal noise and signal interference
- Sunlight resistant jacket
- Suitable for direct burial, use in cable tray and embedment in concrete
- Suitable for Class I, II and III, Divisions 1 & 2 as per NEC 2008 and NEC 2011 (HL Rated)
- Three symmetrical grounding conductors for PWM/VFD and other modern AC drive/motor applications
- Phase identification: Color coded (black, red, blue) polyester ribbon laid longitudinally under the copper shield tape

BEND RADIUS

- Fixed position: 7 x cable overall diameter
- During pulling: 12 x cable overall diameter

Notes:

- 1) Ampacities in air are based on NEC 2011 Table 310.60(C)(71), 5001-35,000 Volts Ampacity column, for insulated three conductor copper cable isolated in air, maximum conductor temperature of 105°C, ambient air temperature of 40°C.
- 2) Ampacities in cable tray are based on NEC 2011 Table 310.60(C)(75), 5001-35,000 Volts Ampacity column, for insulated three conductor copper cable in isolated conduit in air, maximum conductor temperature of 105°C, ambient air temperature of 40°C.
- 3) Ampacities for direct burial are based on NEC 2011 Table 310.60(C)(83), 5001-35,000 Volts Ampacity column, for insulated three conductor copper cable, directly buried, maximum conductor temperature of 105°C, ambient earth temperature of 20°C, 100 percent load factor, earth thermal resistivity of 90°C cm / W.

* Three conductor cables with 3 ground wires are also suitable for VFD applications.

CORFLEX® MV-105 OR MC-HL MEDIUM VOLTAGE 15KV 100% INSULATION LEVEL & 133% INSULATION LEVEL

Rated 105°C • 3 Conductors with 1 Bare Ground

Conductor

Bare, annealed copper conforming to ASTM B3 and Class B Compact stranded in accordance with ASTM B496.

Grounding Conductor

Bare, annealed copper conforming to ASTM B3 and Class B stranded in accordance with ASTM B8.

Insulation Shield Nonmetallic

Extruded semiconducting insulation shield meets or exceeds electrical and physical requirements of UL 1072.

Armor

Continuous corrugated and welded, impervious aluminum sheath with no more than 0.2% trace copper providing complete protection against liquid and gas ingress. Provides excellent mechanical protection, additional electrostatic shielding, and serves as an easy means for grounding equipment.

Conductor Shield

Extruded semiconducting conductor shield meets or exceeds electrical and physical requirements of UL 1072.

Insulation

EPR meets or exceeds electrical and physical requirements of UL 1072.

Metallic Shield

Bare copper tape shield helically wrapped to provide 100% coverage.

Binder Tape

Synthetic material assembles the core in an essentially round configuration.

Jacket

Overall red polyvinyl chloride jacket per UL 1072, 90°C temperature rating; low acid gas emission; limited flame spread and excellent corrosion resistance.

APPLICATION

Designed and constructed for the demanding environments of offshore drilling and petroleum facilities located throughout the world requiring a type MV-105 or MC-HL Medium Voltage cable.

FEATURES

- UL listed as Marine Shipboard Cable (File E86139)
- UL listed as Type MV-105 15 kV (File E66901)
- Flame retardant: UL 1685 and IEEE 383 vertical tray fire tests at 70,000 BTU/hr, IEC 60332-3 category A fire test, IEEE 1202 and CSA FT4
- Cables are American Bureau of Shipping (ABS) listed as CWC MC Type MV/MC (Metal Clad, Medium Voltage)
- Cables are marked “-40°C” and are suitable for handling and installation down to -10°C (based on -40°C impact and bend tests per UL 1569)
- Continuous, impervious aluminum armor corrugated for flexibility, prevents ingress of moisture, gases and liquids
- Aluminum armor resistance exceeds requirements of the NEC 2008 and NEC 2011 Article 250.178 for equipment grounding conductor
- Excellent mechanical and physical properties
- Minimal noise and signal interference
- Sunlight resistant jacket
- Suitable for direct burial, use in cable tray and embedment in concrete
- Suitable for Class I, II and III, Divisions 1 & 2 as per NEC 2008 and NEC 2011 (HL Rated)
- Phase identification: Color coded (black, red, blue) polyester ribbon laid longitudinally under the copper shield tape

BEND RADIUS

- Fixed position: 7 x cable overall diameter
- During pulling: 12 x cable overall diameter

Ratings & Approvals

- 105°C Temperature Rating
- Meets UL 1309 and IEEE 1580 requirements for Marine Shipboard Cable
- Meets UL 1072 requirements for medium voltage power cables
- Meets UL 1569 requirements for Type MC, Metal Clad cables
- Meets UL 2225 for Hazardous Locations (MC-HL)
- Designated Type MC as per NEC 2008 and NEC 2011 Article 330
- Insulation meets electrical and physical requirements of ICEA S-93-639/NEMA WC 74 and UL 1072
- Designated Type MV-105 as per NEC 2008 and NEC 2011 Article 328

Notes:

- 1) Ampacities in air are based on NEC 2011 Table 310.60(C)(71), 5001-35,000 Volts Ampacity column, for insulated three conductor copper cable isolated in air, maximum conductor temperature of 105°C, ambient air temperature of 40°C.
- 2) Ampacities in cable tray are based on NEC 2011 Table 310.60(C)(75), 5001-35,000 Volts Ampacity column, for insulated three conductor copper cable in isolated conduit in air, maximum conductor temperature of 105°C, ambient air temperature of 40°C.
- 3) Ampacities for direct burial applications are based on NEC 2011 Table 310.60(C)(83), 5001-35,000 Volts Ampacity column, for insulated three conductor copper cable, directly buried, maximum conductor temperature of 105°C, ambient earth temperature of 20°C, 100 percent load factor, earth thermal resistivity of 90°C cm / W.

CORFLEX® PULLING INSTRUCTIONS

Certain installations require the pulling of CORFLEX® into ducts or trays. These installations require careful planning and execution. The following provides information on how to calculate tensions developed during pulling and what precautions to take to prevent damage to the cable.

Pulling Tension

The maximum tension applied to a cable is limited to prevent damage or distortion of cable components which could reduce the life or reliability of the cable. The method of pulling is significant in that different methods will result in different stresses on critical cable components for the same overall tension. Nexans AmerCable recommends that CORFLEX MC-HL Instrumentation 600V cables are pulled by means of the aluminum sheath and jacket with a grip applied over the jacketed core, sheath and overall jacket. All other CORFLEX cable types described in this catalog should be pulled by means of the conductors, aided with a grip over the outer aluminum sheath. **The conductors and the sheath must be pulled together.** Maximum allowable pulling tensions for CORFLEX cables should never exceed the values shown in pulling tension table.

Calculating Pulling Tensions

The tension developed in any **Straight Section** of duct is calculated as:

$T = L \times W \times f$ lbf where

L = section length (feet)

W = cable weight per unit length (lb/foot)

f = coefficient of dynamic friction

The tension developed in any

Bend is calculated as:

$T = T_1 \times e^{f\alpha}$ lbf where

T₁ = tension at bend entrance (lbf)

e = base of natural logarithms (2.71828)

f = coefficient of dynamic friction

α = angle of bend (radians)

or e^{fα} is given in the following table for common conditions:

Bend Angle	f=0.15	f=0.30	f=0.35	f=0.40
30°	1.08	1.17	1.20	1.23
45°	1.13	1.27	1.32	1.37
60°	1.17	1.37	1.44	1.52
90°	1.27	1.60	1.73	1.88

Coefficients of dynamic friction with lubricant are given in the following table for common duct and cable jacket materials. These coefficients can be used for calculation of tensions.

Duct Type	Cable Jacket	Coefficient of Friction
PVC	PVC	0.50
PE	PVC	0.30
Fiber	PVC	0.40
Asbestos Cement	PVC	0.70

Considerations must be given to **Side Wall Bearing Pressure (SWBP)** when pulling CORFLEX through a bend. The SWBP is calculated as follows:

$$SWBP = \frac{\text{Pulling Tension Cable at Bend Exit (lbf)}}{\text{Radius of Bend (feet)}}$$

For CORFLEX, Nexans AmerCable recommends a maximum SWBP of 500 pounds force/foot. During installation of the CORFLEX cable, it is recommended that the bend radii be as noted in the cable descriptions.

Pulling in Duct

It is extremely important for the success of any pull in duct to use approved lubricants. Lubricants must be compatible with the cable jacket and duct material. Lubricating the pulling rope will decrease the tension on the pulling equipment and more importantly will reduce the risk of damage to the inside of the duct which in turn can damage the cable. When designing the duct layout, it is suggested that the bends be concentrated near the end from which the cable is to be pulled. This practice will result in lower tensions. In some cases, the tensions resulting from alternative directions should be calculated.

Pulling in Trays & Trenches

For the installation of CORFLEX in trays, rollers are normally used. Using well lubricated rollers and long radius sheaves at bends will result in a lower coefficient of friction when compared to duct. A coefficient of friction of 0.15 can be used when calculating pulling tension using rollers. For long pulls with bends it may be necessary to install assist pullers before the bends to reduce the tension on the cable entering a bend and reducing the risk of damage from excessive SWBP.

The recommendations given above are intended to cover a wide variety of pulling conditions. It is possible, under ideal conditions, and with experienced supervision, to exceed these limits.

For further guidance, see IEEE Paper 84 T & D 365-3, or contact Nexans AmerCable.

Pulling Tension Tables

Nexans AmerCable is an ISO 9001 certified cable manufacturer that combines leading-edge manufacturing technology, innovative thinking, and high quality service to deliver the finest oil & gas cable and engineered cable assemblies available.

Nexans AmerCable serves the world from our Oil & Gas Group headquarters in Houston, Texas. Our professional field engineers and sales force work with you to create innovative, cost-effective project solutions.

WHAT CAN YOU EXPECT FROM NEXANS AMERCABLE?

- Best at On-Time Delivery
- Outstanding Engineering Support and Customer Service
- Innovative Productivity Solutions
- Global Cable Management

The industry standard for flexible, high quality power, control and instrumentation Type P cables.

Low smoke halogen-free fire resistant or flame retardant Type P cables

Foil shielded, power cables engineered for use in variable frequency AC drive applications. Available in several constructions

Crush and Impact Resistant Type P cables *without* external armoring

Precision engineered cable assemblies for hazardous and industrial applications

Top Drive Service Loops
